

ENG 101
LESSON 14

My sister had a trenchant way of cutting our bread-and-butter for us, that never varied. First, with her left hand she jammed the loaf hard and fast against her bib-where it sometimes got a pin into it, and sometimes a needle, which we afterwards got into our mouths. Then she took some butter (not too much) on a knife and spread it on the loaf, in an apothecary kind of way, as if she were making a plaister-using both sides of the knife with a slapping dexterity, and trimming and moulding the butter off round the crust. Then, she gave the knife a final smart wipe on the edge of the plaister, and then sawed a very thick round off the loaf; which she finally, before separating from the loaf, hewed into two halves, of which Joe got one, and I the other.

(CHARLES DICKENS, *Great Expectations*)

What does this account of Mrs Gargery cutting bread tell us about her?

Study the following passage from P.G. Wodehouse's 'Thank you, Jeeves'.

'Jeeves', I said, 'do you know what?'

No sir.'

'Do you know whom I saw last night?

'no, sir.'

'J. Washburn Stoker and his daughter, Pauline.'

'Indeed, sir?'

'Awkward, what?'

'I can conceive that after what occurred in New York it might be distressing for you to encounter Miss Stoker, sir. But I fancy the contingency need scarcely arise.'

I weighed this.

'When you start talking about contingencies arising, Jeeves, the brain seems to flicker and I rather miss the gist. Do you mean I ought to be able to keep out of her way?'

'Yes, sir.'

‘Avoid her?’

‘Yes, sir.’

(P.G. WODEHOUSE, Thank
You, Jeeves)

Here is a lesser known character from Hard Times:

Thomas Grandgrind, sir. A man of realities. A man of facts and calculations. A man who proceeds upon the principle that two and two are four, and nothing over, and who is not to be taled into allowing for anything over. Thomas Gradgrind, sir-peremptorily Thomas-Thomas Gradgrind. With a rule and a pair of scales, and the multiplication table always in his pocket, sir, ready to weight and measure any parcel of human nature, and tell you exactly what it comes to. It is a mere question of figures, a case of simple arithmetic. You might hope to get some other nonsensical belief into the head of George Gradgrind, or Augustus Gradgrind, or John Gradgrind, or Joseph Gradgrind (all suppositious, non-existent persons), but into the head of Thomas Gradgrind-no sir!

(CHARLES DICKENS, Hard
Times)

‘He was a tiny fellow, with a leathery white face under black hair, and tied to the case he’d brought were the most enormous gumboots I’d ever seen.’

‘Mrs Goss was a widow, a neat little woman of over seventy: and witchlike.’

‘He was a deeply depressed man, this farmer, who always wore a white coat and cloth cap, and was always peppered with a white-and-black bristle.’

‘He was a tall, silent, dark man, very gentle, who would tut over his machine as if it were some moody woman.’ ‘On the strawstack was a boy: a short, stout boy with a kind of naked pertness about his eyes and a very runny nose.’ Describe five varied characters, using one sentence of or each, and

try to make them alive by the way you use] words or by giving to each a particular descriptive detail that defines him

Such as	illustrated by	example etc.

Like seen in namely

Sample sentences with examples in italics:

1. The switches, like the cores, are capable of being in one of two possible states *that is*, on or off; magnetized or unmagnetized. 2. Computers have circuits for performing arithmetic operations *such as*: addition subtraction, division, multiplication and exponentiation. 3. The computer can only decide three things, *namely*: Is one number less than another? Are two numbers equal? Is one number greater than another?

4. Computers can process information at extremely rapid rates; *for example*, they can solve certain arithmetic problems millions of times faster than a skilled mathematician.

5. Using the very limited capabilities possessed by all computers, the task of producing a university payroll, *for instance*, can be done quite easily.

N.B. Sometimes the markers follow the example, separated by commas.

Not all texts present examples explicitly, some exemplifications are given implicitly, in which case, the above markers are not used.
