

ENG 101
Lesson - 38
Dr.Surriya Shaffi Mir

The two types of processes.

A Linear Process

A Cyclic
Process

Lesson 38 –Ways of Organizing Texts
Cyclic Process & Cause - Effect

In the last lesson you learned how to write up a time – based (chronological) sequence and a linear process

– a process that consists of a series of stages and which has a beginning and an end. In today's lesson you will still be looking at processes but this time cyclic not linear. A natural process is more likely to be cyclic than linear. As the word itself tells you, in a cyclic process there is no clear beginning or end, so that the cycle continues. The above two diagrams illustrate clearly the difference between the two types of processes. A cyclic process is described in very much the same way as a linear process except that it is not always clear where the cycle begins.

The Carbon Cycle

Volcanoes

CARBON DIOXIDE
IN ATMOSPHERE

Burning of
coal, wood oil

Plants & animals
decayed by bacteria
& fungi

used in photo-
synthesis

by respiration
of animals

by respiration
of plants

eaten by animals

Sometimes, when plants and animals die and decay, bacteria act upon the decayed body and liberate carbon dioxide as one of the products. (__)

Similarly, plants respire at night and give out carbon dioxide to the atmosphere. (__)

But this never happens because when plants take in carbon dioxide during the day time, animals give out carbon dioxide as a result of respiration. (__)

Carbon dioxide from the atmosphere is used by plants for photo synthesis (__)

Sometimes, coal, wood and oil are burnt and this produces carbon dioxide gas which goes to the atmosphere. (__)

This is known as the carbon cycle in nature. (__)

So in this way carbon dioxide is returned to the atmosphere. (__)

Carbon dioxide is usually found in the atmosphere, while the compounds such as carbohydrates, carbonates and bicarbonates are found in animals, in plants and in the soil. (__)

ix) Therefore, there is always a continuous cycle – in which carbon is being removed and replaced in some way or other. (__)

If plants keep on removing carbon dioxide from the atmosphere, then very soon the atmosphere may be without any carbon dioxide. (__)

Acceptable order would be: viii, iv, x, iii, ii, i, vii, v, ix, vi.

The Life Cycle of the Malaria Parasite

Practice 2:

Study the flow diagram and the text. Some of the sentences should not be there: i.e. they are irrelevant. Which ones are they?

The Life-Cycle of the Malaria Parasite

1 Malaria is caused by tiny one-celled animal parasites called PLASMODIA that are injected into the blood of man by the female ANOPHELES mosquito.

2 Some diseases are transmitted by tiny water animals. 3 The anopheles mosquito sucks blood from a person with malaria. 4 Once in the stomach of the mosquito these parasites undergo some development and end up in the mosquito's salivary glands. 5 House flies transmit microbes on their feet.

If this mosquito now bits a healthy person, it introduces some parasites together with the saliva, into the blood of the person. 7 The malarial parasites then enter the person's liver, in which they change and multiply.

8 From there they pass into the blood cells, where they cause the malaria attack 9 The spread of insect-borne disease can be controlled.

Practice 3

The above diagram shows how used water is treated and made clean for use. Write a description of this cycle. When writing keep the following points in mind. To explain the cycle consider the best point to enter it.

Break down the cycle into stages. Consider the basis on which the stages might be defined. Use a thesis statement for the introductory paragraph.

Use topic sentences for each paragraph within the text.

Give a title to your writing.

1 In the northern areas of Pakistan the once magnificent forests are slowly being destroyed by the effects of air pollution. 2 Pine trees dying from pollution lose their needles, allowing sunlight to reach the forest floor.

3 During this process grass thrives in the increased sun light and drives out the plants native to the soil, such as moss, which helps to hold rainwater. 4 The soil thus loses its natural power to absorb water and in turn becomes hard which causes rain and snow to slide over the ground instead of being slowly absorbed into it. 5 This results in erosion of the soil. (6) After a heavy downpour, the eroded land finally falls away in huge land slides destroying villages and whatever else that comes in its way, and later causing floods in the plains.

Cause

1. Air pollution
2. Sunlight causes grass to grow

Effect

- forests being destroyed
- pine trees lose needles
- native plants driven out
- soil erosion, land slides
 - villages destroyed
 - floods

The following table gives some guidelines on the language available for writers to state their degree of certainty

Degree of Certainty		Verbs
Adverbs		
Complete		is (not)
Certainly		
definitely		will (not)
	clearly	
		must (not)
undoubtedly		
		actually
	strong	
Partial		can / cannot
	less strong	could (not)
		probably
		should (not)
presumably		
		may (not)
		possibly
		might (not)
		perhaps
Impersonal i.e.		It is said that.....
Not commitment		x reports that.....
of self		- there is evidence to
suggest that ...		

HOW TO WRITE CAUSE AND EFFECT

Cause and effect are closely related. There are several ways of expressing cause-effect relationship in English. You may either place the cause or the effect first in the sentence. The following sentences contain the same expression, yet one focuses on cause while the other focuses on effect.

1. Because of his depression, he remained quiet

2. He remained quiet because of his depression.

When you write about cause and effect you have to decide for yourself whether the cause or the effect is more important to you, and what you will focus on.

There are many ways of expressing causal relatives in English. The simplest way of showing cause is: because + clause

e.g The war started because (the extremists had the upper hand in the government).

Practice 4 Read the following text and note three expressions used by the writer to show causality. Use (C) for cause and (E) for effect.

TUBERCULOSIS OF THE LUNGS

1Pulmonary Tuberculosis is caused by infection of the lungs with the tubercle bacillus. 2Pulmonary damage is due almost entirely to the human form of the tubercle bacillus, as distinct from the type found in cattle which is mainly responsible for glandular and bovine tuberculosis. 3The bacteria lodge in the lungs are set up a chronic inflammation of a specific, type. 4 They produce areas of infiltration which have a

characteristic tubercle formation; hence the name for the organism.

-*Study Writing*, Lyons & Heasley. CUP

Practice 5: Which words in the following text show cause and effect relationship?

When rain falls on mountains it collects in depressions in the rocks. The extreme cold causes the ice to freeze and glaciers to form. The ice melts and freezes again due to / with changes in temperature. Erosion of the rock of the mountain depression occurs as a result of the continual melting and re-freezing, and is worsened by / made worse by / increased by the action of wind moving the water. Eventually, the water wears away the rock to form a small stream which carries deposits of soil and rock which cause further erosion, gradually enlarging the stream.

Practice 6:

Read the following text and see if you can spot cause and effect words.

Watching violence on TV is beneficial and helps decrease violent behavior because viewers get rid of some of their own aggressive impulses through viewing and in this way reduce the chance that they will perform aggressive acts.
